5# 2164

MEMORANDUM FOR: Director of Research and Reports

THROUGH: Chief, Economic Research Area  
Chief, Trade and Services Division

SUBJECT: Information on Firms Supplying Nuclear Technology and Equipment to Communist China

The attached list of foreign firms and their principal products has been compiled in answer to a request from O/DDI to assist OSI in providing Senator Gore the names of Free World companies exporting atomic energy related materials to Communist China. Purely trading companies have been included where they have been the avenue of export of these materials to China. Also attached is a list of the source documents identifying specific cases of this trade. We understand from the legal counsel's office that this information can be released to the Senator at the Secret level in this generalized form, with no identification of specific item or source given. In a relatively few instances the generalized product of the firm does identify the specific material traded. Although the products manufactured or traded by these firms are not necessarily unique to atomic energy programs, these items are important, and in many instances indispensable, in the development and advancement of atomic energy and atomic weapons programs.
